

## LIP LIFT

If sagging lips are the problem, then a lip lift may be the answer. This cutting edge procedure is an alternative to injectables and should last much longer—though it hasn't been around long enough to guarantee permanent results.

As we age, the upper lip sags and less of the red part of the lip shows. To compensate for this, a surgeon can make a minute incision under the top lip and put a stitch through the inside of the nose, pulling the lip upward. It takes a very short time and you can usually be back at work the next day.

## DOWN THE STRETCH

Is it fad or is it fabulous? The latest crème-de-la-crème of skin creams has achieved its notoriety by accident. StriVectin-SD was originally formulated as a topical lotion for stretch marks, but, due to its marketing—or to some confusion about its purpose—it has become the facial cream of choice for many of its purchasers. Why? According to its fans, it has anti-wrinkle qualities that rival, if not exceed, Botox. Wrinkles are supposedly softened, crow's feet are smoothed and the result is a double whammy: good-bye stretch marks and wrinkles.

## SMILE OF SUPPORT

Dr. Vince Bhandari of the Bronte Village Mall Dental Office likes to put his money where his mouth is. The Oakville dentist sponsored eleven of his clients in the two-day Weekend To End Breast Cancer Walk in Toronto. Whenever a patient came in for BritaSmile, a teeth whitening process, he donated the proceeds to the cause—to the tune of \$2,500. In total, Dr. Bhandari's patients raised \$27,000.
